

MEDI-CAL FUNDED INDUCED ABORTIONS 1994

Medi-Cal Report published March 1996

ABSTRACT

This is the fifteenth annual report on Medi-Cal funded abortions. The report provides summary tables on the number of procedures performed during 1994, the type of facility where a procedure was performed, and Medi-Cal expenditures for these procedures. The data are presented on both county and state levels.

Questions regarding data provided in this report and any other inquiries related to Medi-Cal funded deliveries in California may be directed to [Samira Al-Qazzaz](#) at (916) 657-2966.

HIGHLIGHTS

- o Medi-Cal funded a total of 104,010 fee-for-service (FFS) abortions^{1/} in 1994 and paid an average of \$342 per procedure, totaling \$35.6 million for all abortions.
- o The average monthly rate of abortions per 1, 000 eligible women 15-44 years old, 7.4, was lower than that of 1993, 8.0.
- o More than one-third, 36 percent, of Medi-Cal funded abortions were performed for women 20-24 years old.
- o Abortion services to hispanic females accounted for 30 percent of total abortions exceeding, for the second year in a row, that of white females.
- o The sharpest drop in the number of abortions from 1993-1994 was for IRCA eligible women, 72 percent.
- o Los Angeles County accounted for 41 percent of all abortion services rendered to OBRA and 59 percent of all abortion services to IRCA eligibles.
- o More than two thirds of the abortions, 69 percent, were done at a physician's office averaging 67 abortions per office location.
- o The cost of an abortion performed on a hospital inpatient basis averaged \$2,254 per abortion. Abortions done at a physician office averaged \$295 per abortion which is lower than that of abortions done at clinics and hospital outpatient.
- o The number of Medi-Cal eligible women who received abortion services was 96,042, ten percent less than 1993. Ninety-two percent of these women had only one abortion.

^{1/} The term abortion as used in the report refers to induced abortions only

INTRODUCTION

The number of induced abortions funded by Medi-Cal during 1994, on a fee-for-service (FFS) basis, 104,010, is about ten percent lower than 1993. Medi-Cal payments for these abortions was about eleven percent lower than 1993.

The decline, the first since 1988, is partly due to the implementation of managed care programs in rural counties. As explained in "Data Qualification" on page 2, service by service data are not available from managed care.

While the number of Fee for Service (FFS) Medi-Cal funded abortions decreased ten percent during 1994, the number of eligible women ages 15-44 decreased one percent from 1993 to 1994. This resulted in a less than one percent drop in the rate of average monthly number of abortions per 1,000 eligible women 15-44 years old. This drop is a continuation of the trend that started in 1988 and adds up to a 30 percent decline through 1994.

Unfortunately, the total number of abortions for California women in 1994 is not available. The 1992 total of 338,700 was estimated by the Center for Disease Control (CDC). This is about a four-percent decrease from the 1991 estimate of 350,983. Medi-Cal funded induced abortions increased one percent for the same period, from 111,196 in 1991 to 112,294 in 1992.

DATA QUALIFICATIONS

This report discusses abortions which occurred during calendar year 1994 and appear on the Medi-Cal paid claims file between January 1994 and September 1995. The 21-month file was used in order to allow for delays in submitting or processing hospitals, clinics and physicians claims.

Abortions performed for enrollees in Prepaid Health Plans (PHPs) are not included in this report. Medi-Cal payments to these PHPs are made monthly on a capitated basis. The plans do not submit claims for individual services. Accordingly, it is not known exactly how many abortions these plans account for. A rough estimate is 13,100./1/

Beginning April 1, 1994, the Geographic Managed Care (GMC) Program began in Sacramento County. This pilot project was authorized under AB336 and SB485 to enroll AFDC and AFDC linked recipients into contracted comprehensive managed care plans on a mandatory basis. Claims of medical services rendered to enrollees in GMC were not completed for the period of this report. Based on previous years' data, an estimated 2,000 Medi-Cal funded abortions are covered by the GMC program and are not included in this report.

Solano, is another county for which our count of abortions were incomplete. A county organized health system (COHS) was implemented as of May 7, 1994. Counts for Medi-Cal Services were not yet available at the time this file was put together. There is an estimated 1,000 abortions missing from the total for Solano.

/1/ This estimate is based on the number of abortions for Medi-Cal FFS eligible women 15-44 years old in aid categories, Families, Blind, Disabled and Medically Indigent Children No-Share-of-Cost (90,045), calculated in relation to the monthly average number of FFS eligible women between 15 and 44 years (955,584), and the monthly average number of PHP female enrollees ages 15-44 in the same aid categories (139,159). Totals are taken from "State of California, Department of Health Services, CID Eligibles, Age/Sex Characteristics, July 1994, run date January, 1995".

Medi-Cal FFS Eligibles, Induced Abortions, and Expenditures

While total Medi-Cal FFS expenditures increased 301 percent from 1977 through 1994, payments for Medi-Cal funded induced abortions fluctuated from year to year, from a low of \$26.6 million in 1984 to a high of \$40.7 million in 1991.

During the eleven year period from 1984 through 1994, the average monthly number of eligible women ages 15-44 increased 95 percent, while the number of abortions for the same age group increased 30 percent. This corresponded to a 33 percent drop in the average monthly rate of abortion per 1,000 eligible women from 11.1 in 1984 to 7.4 in 1994 as shown in Table 1.

Distribution of Medi-Cal Funded Induced Abortions by Age and Ethnicity

Women ages 20-24 accounted for 36 percent of abortions for hispanics and blacks. The same age group of asian and pacific islanders accounted for 28 percent of total abortions for that group.

For the second year in a row 1988/a/, hispanic women accounted for the highest percentage of abortions, 30 percent, followed by white women who accounted for 28 percent. During 1988 white women accounted for 35 percent of abortions followed by black women, 25 percent, and then hispanic women, 20 percent.

The percentage of abortions for women of Asian and Pacific Islands origin has slowly increased during the past four years from five percent in 1990 to 6.9 in 1994. In the mean time the percentage of abortions for black women has dropped four and a half percent from 26.5 percent in 1990 to 22 percent in 1994.

Distribution of Medi-Cal Funded Induced Abortions by Age and Aid Category

IRCA/1/ eligibles accounted for the highest percent drop in the number of abortions, about 72 percent, from 1993 to 1994. Abortions for women in the 185 percent poverty/2/, excluding IRCA and OBRA, continued its slight increase to 3,478 from 3,396 in 1993, about three percent.

/1/ OBRA and IRCA refer to a new program which was mandated by the federal Omnibus Budget Reconciliation Act (OBRA) and the Immigration Reform and Control Act (IRCA) both of 1986. Under IRCA the status of certain aliens unlawfully residing in the United States may be adjusted to permanent resident status. Otherwise eligible amnesty aliens who are aged, blind, disabled, or under 18 are entitled to full Medi-Cal services. Those who are not, are entitled to restricted Medi-Cal services during the first five years of amnesty, and to full services there-after. OBRA applies to other aliens such as undocumented and temporary visa aliens. They are only entitled to restricted Medi-Cal benefits. The IRCA program was discontinued in December 1994.

/2/ This federal and state funded program became effective in July 1989. It extended Medi-Cal coverage for program-related services to pregnant women whose family income does not exceed 185 percent of the federal poverty level.

/3/ Includes 41 abortions for pregnant women at or below 185 percent poverty level with IRCA Status and 3 abortions for pregnant women at or below 200 percent poverty level with IRCA status.

/4/ Includes 567 abortions for pregnant women at or below 185 percent level with OBRA status.

/5/ Does not include women with OBRA and IRCA status. See footnotes 3 and 4.

/6/ Does not include women with IRCA status. See footnote 3.

Note: For county data by aid category see Table 9.

Source: State of California, Department of Health Services, HR70 Summary, Maternal Care File, 1994.

Distribution of Medi-Cal Funded Induced Abortions by Type of Facility

During 1994, the largest number of Medi-Cal funded abortions was performed at physicians' offices, accounting for 69 percent, followed by clinics, 18 percent. Sixty percent of Medi-Cal payments for abortion services was for physicians. Abortions performed at physicians' offices were the least costly. At an average cost of \$295 per abortion it was \$73 less than the cost at a clinic and \$188 less than the cost at a hospital outpatient department.

Even though only one-half of a percent of all abortions were performed at hospital inpatient departments, Medi-Cal payments for these abortions accounted for about four percent of total Medi-Cal abortion expenditures, averaging \$2,254 per abortion. The average cost of abortion, excluding those done in hospital inpatient departments was \$331.

For county data on number of abortions and Medi-Cal payments by type of facility see tables 10 and 11.

Source: State of California, Department of Health Services, HR70 Summary, Maternal Care File, 1994.

All types of facilities reflected a drop in the number of fee-for-service induced abortions from 1993 to 1994. There was also a drop in the number of hospitals and physicians providing abortion services except for the clinics which increased to 160 in 1994 from 142 clinics in 1993.

Frequency of Medi-Cal Funded Induced Abortions

During 1994, as in previous years, an estimated one percent or less of all FFS Medi-Cal eligible women ages 15-44 had an abortion. About eight percent of these women had more than one abortion throughout the year. The largest group was women ages 20 to 24 who accounted for 37 percent of all repeat abortions.

County Distributions of Medi-Cal Funded Induced Abortions

The following four tables display the distribution of abortion services by county. Individual county data do not necessarily reflect the same number and expenditure distributions which exist statewide.

Data provided in Tables 7, 8, 9, 11 and 12 are distributed by county of eligibility, i.e., the county that appears on the Medi-Cal card of the beneficiary. It should be noted that this is not necessarily the county of residence at the time of service, since a beneficiary could have moved from one county to another, and her eligibility might have been transferred at the time the service was rendered. Data in these tables may also include services performed outside California for a Medi-Cal beneficiary.

Data provided in Table 10 are distributed by county of provider; i.e., county of occurrence.
